Career Summary

AI & Data Science graduate with hands-on experience in **data analysis, reporting, and KPI dashboard creation** using Python and Power BI. Proficient in building automated workflows, managing data pipelines, and generating actionable insights from large datasets. Experienced in applying EDA techniques, financial data reporting, and supporting project tracking and documentation. Eager to contribute to **Project Controls and Reporting & Automation** roles in fast-paced project environments.

Skills

Programming	Python, SQL, C++, JavaScript, HTML, CSS
Machine Learning & AI	Scikit-learn, TensorFlow, OpenCV, LangChain, RAG, LLM App Development, Generative AI
Reporting & Analytics	Power BI, Pandas, NumPy, Matplotlib, Seaborn, MS Excel, MS Office 365
Databases	MySQL, MongoDB, Power Apps (familiar), Power Automate (familiar)
Tools & Platforms	MS Project (familiar), Jupyter Notebook, Git, GitHub, Docker, Postman
Core Concepts	Data Analysis, KPI Dashboards, EDA, Feature Engineering, Financial Reporting, Quality Assurance, Supervised & Unsupervised Learning, Documentation

Experience & Contribution

Edunet Foundation: Data Analytics Intern	Feb 2024 –April 2024
--	----------------------

- Conducted EDA on 500+ space mission records using **Python and Power BI**, identifying launch success trends across 20+ years — directly analogous to financial data collation and project KPI tracking.
- Built interactive **KPI dashboards** for space mission datasets, covering data integration, visualization, and reporting in formats suitable for project management review.
- Prepared **data-driven financial and operational reports** by applying EDA techniques to support decision-making — mirroring finance reporting and cost-tracking responsibilities in project roles.
- Managed and maintained structured project databases and file systems to ensure data accuracy, compliance, and easy retrieval.

Projects

Project Reporting & KPI Automation — Multimodal Financial Intelligence System (RAG-Based)

- Designed a **Retrieval-Augmented Generation (RAG) pipeline** to extract and analyze financial reports, tables, and graphs from PDF documents — simulating financial database management and report preparation.
- Leveraged GPT-4 Vision to convert chart visuals into structured textual data, supporting KPI monitoring and cost-analysis workflows.
- Demonstrated ability to produce financial insights in structured formats aligned with Project Manager requirements.

Data-Driven Prediction & Quality Reporting — AI-Powered Crop Health & Yield Prediction System

- Developed AI-based prototypes for **health monitoring and yield prediction** using ML techniques — applying quality assurance and performance reporting principles to real-world data.
- Applied computer vision (Python, OpenCV, TensorFlow) for diagnostic analysis, paralleling quality KPI reporting and configuration management in project environments

Database & Platform Management — Cloud-Based Audiobook Streaming Platform (MERN)

- Built a full-stack platform with **secure authentication, invoice-style APIs, and structured backend** using Node.js, Express, and MongoDB — reflecting experience in payment certificate templates, database upkeep, and correspondence management.
- Engineered scalable databases and file system structures ensuring compliance and efficient data retrieval, aligned with project document control needs.

Education

Course	Institute	Passing Year
BE – AI & DS	AISSMS Institute of Information Technology, Pune	2021 - 2025

Certifications

- **Machine Learning Specialization** – Stanford University ([Coursera](#))
- **DP-203: Azure Data Engineer Associate** – Course ([Udemy](#))

Leadership & Extracurricular Experience

AISSMS Institute of Information Technology

- Served as a Core Committee Member of the NSS, contributing to event planning and execution.
- Held the position of Treasurer in the Artificial Intelligence Student Association, responsible for budgeting and expense monitoring
